education

UNIST ·B.S. in Computer Science and Engineering (in progress)

Mar. 2022–Present

Coursework: Mobile Computing (A0), Data Structures (A−), Database Systems (A−).

Currently taking: Deep Learning and Introduction to Data Mining.

research interests

Human-Computer Interaction (HCI); Human-Centered AI; AI Evaluation; Reliable Machine Learning; Distribution Shift.

research experience

Data Mining Lab ·AICP Research Participant ·Apr.–Oct. 2026

Lab ·Advisor: Prof. Junghoon Kim

Artificial Intelligence Challengers Program

Embedding-Based Structure-Preserving Graph Rewiring for Community Detection

- Research poster co-author.

AI-CORE Lab ·Reinforcement Learning Research Intern ·Jun.–Aug. 2026

Lab ·Advisor: Prof. YoungSoo Jang

- Reviewed research papers on offline reinforcement learning, including conservative value estimation and distribution correction.
- Presented research seminars and led a textbook study group on reinforcement learning fundamentals.

Korea Workers'Compensation & Welfare Service ·Apr.–Jul. 2026

Collaborative Research Participant ·Insurance Enrollment Prediction

- Conducted exploratory data analysis and geocoded enrolled businesses'addresses using the Kakao API to visualize their spatial distribution.

projects

BATT-Route: Battery-aware Routing for Mobile LLM Services

Mar.–Jun. 2026 ·Mobile Computing ·4-member team ·Course research report co-author

- Proposed battery-aware edge-cloud LLM routing and implemented the routing algorithm using battery level and query characteristics; selected evaluation datasets and established baselines.

K-AI Manufacturing Data Analysis Competition

Sep.–Oct. 2026 · 3-member team · EDA & feature engineering

- Performed exploratory data analysis and feature engineering, identifying duplicated power-use patterns, integrating weather and holiday data, and screening ~100 candidate features using a random forest with SHAP and permutation importance.

K-SHIFT: Fine-Grained Diagnostic Testing of Korean NLI under Semantic Shifts

Sep. 2026–Present · Deep Learning · 2-member team · Proposal stage

- Formulated the research question and reviewed prior work for a diagnostic evaluation of Korean NLI models under changes in negation, quantity, and conditional expressions.
- Planned responsibility: experimental design; implementation and experiments will be conducted by a teammate.

honors

Student Merit Award (Team Award), UNIST · Sep. 2026

Team recognition for service through CSE Supporters, the CSE Student Council.

First Place (5-member team), Student Startup Competition, KAIST · May 2023

Awarded by the Director of the KAIST Center for Entrepreneurship.

Presentation slides

leadership & service

Member, CSE Supporters, UNIST · Mar. 2026–Present

Member, HeXA Computing Club, UNIST · Mar.–Jul. 2025

- Designed a campus carpooling service.

President, UNIST Startup Bible (USB) · Dec. 2022–Sep. 2023

Joined USB in Apr. 2022.

- Secured KRW 8 million through Ulsan's 2023 Youth Community Revitalization Program.

technical skills

Machine learning: Supervised learning, model training and evaluation; exploratory data analysis.

Languages: Python, C/C++, SQL, MATLAB

Tools: Docker, Android Studio

language proficiency

English: G-TELP Level 2: 77 · Sep. 2026

military service

Republic of Korea Army · Sergeant (discharged) · Sep. 2023–Mar. 2025

1st Special Forces Brigade (Airborne).
